Software Engineer - Internship

About Edmingle:

Edmingle is a leading **SaaS platform** that enables educators, training companies, and learning businesses to build, manage, and scale their online learning operations — all under their own brand.

With **600+ customers across 20+ countries**, Edmingle is trusted by some of the **most renowned and fast-growing EdTech organizations** to deliver impactful, scalable, and data-driven learning experiences.

Our platform empowers teams to launch and manage online academies, automate operations, enhance learner engagement, and measure performance through advanced analytics — all within a single, unified system.

As a **rapidly growing global company**, Edmingle is driven by a strong commitment to innovation, customer success, and excellence in learning technology.

Role Description

This is a 6 month on-site internship role for a Software Engineer Intern at Edmingle, located in Bengaluru. The Engineer will be responsible for software development, DB optimisation, frontend development and various other areas on our live projects. They will also be responsible for collaborating with cross-functional engineering teams and working closely with them to develop high-quality and scalable web applications.

You should apply if you

- Love solving complex data and scalability problems
- Have experience working across MongoDB, Mysql, Node.js, Websockets, JS, ReactJS, CSS, PHP.
- Want to work on complex analytics dashboards which are a part of our product offerings
- Love to work in a dynamic and growing startup with a young team
- Love to work collaboratively with cross-functional teams
